

# SMARTRACK VEHICLE TRACKING SOLUTIONS

SmarTrack offers an extensive range of Thatcham approved, award winning tracking systems and monitoring services to ensure a convenient and protective solution for any vehicle type. Whether a device is required to satisfy an insurance requirement or to provide confidence your asset is protected, SmarTrack's varying levels of security ensure there is a device suitable for all needs.

**Repatriation Network** - As well as working with all local and national police forces, Global Telemetrics use independent repatriation investigators around the world to help recover vehicles. These teams have extensive local knowledge and can assist in the recovery of our customers' vehicles.

**International Network Roaming** - SmarTrack uses multi-network, roaming SIMs in all of their products to ensure the strongest network connection at all times.

**Global Telemetrics App** - The app is available for Android/Apple devices. This will show you up-to-date location information.

**Multiple Tracking Technologies** - In addition to GPS-based tracking, we also utilise other technologies to track and locate vehicles in the event of theft. This means we do not solely rely on GPS for obtaining location.

**In-House Monitoring** - 24/7 Secure Control Centre allowing the device to be fully monitored throughout the UK and Europe and the fastest response to any alerts.

**Flexible Subscription Options** - Includes yearly, monthly, 24 and 36 month options and duration of ownership.

**3 year warranty** - As standard SmarTrack devices have a 3 year no quibble warranty. Extendable up to 12 years.
